

Levels of depression and anxiety which closely match levels reported by cisgender children.

- The American Academy of Pediatrics

“Wellbeing was similar to or better than same-age young adults from the general population.”

Positive results across the board, even in 15-year follow ups!

## Social Transition Works

Long-Term follow-up have been researched by The American Academy of Child and Adolescent Psychiatry and the International Society for Sexual Medicine.

“Shown to correlate with improved psychological functioning”

- The Society for Adolescent Health and Medicine

Quality of life rises dramatically with gender affirming treatment.

## Puberty Blockers are Safe and Reversible

Hormone blockers are the only treatment used on adolescents and are completely reversible.

“Does not support an adverse impact of gender-affirming hormone therapy on cognitive performance.”

- International Society of Psychoneuroendocrinology

“Relives distress for trans adolescents ... is reversible.”

- The Journal of Clinical Endocrinology & Metabolism

80% of individuals reported significant improvement in dysphoria.

78% of individuals reported significant improvement in psychological symptoms.

72% of individuals reported significant improvement in sexual function.

Medical Transition Works!

## Hormone blockers are not new!

The International Journal of Transgender Health have reported records of using hormone blockers for delaying puberty “Since the mid 1990s ...”

Puberty blockers are not harmful to bone density.

The Endocrine Society has reported twice in Peer-Reviewed Publication and Science Journals. (Jun 15th 2013 and March 15th 2019.)

Also published in the Journal of clinical medicine.

Puberty blockers do not cause osteoporosis or sterility.

# Trans Rights are Human Rights!

## Social/Familial Support Helps

and can decrease the likelihood of a suicide attempt 57% to 4%

Chosen Name/Pronoun use also Helps!

71% drop in severe depression  
34% drop suicidal ideation  
65% drop in suicide attempts

## Transgender youth are not suffering from a social contagion

The sex assigned at birth ratio of transgender adolescents in the United States does not appear to favor assigned female at birth adolescents and should not be used to argue against the provision of gender-affirming medical care for transgender adolescents.

- American Academy of Pediatrics
